

What is claimed is:

1 1. A computer housing for receiving at least one
2 electronic device therein, comprising:

3 a front panel having at least one access port for
4 access to the electronic device;

5 a receiving chamber located within an inner space of
6 a main body of the computer housing and
7 connected to the access port; and

8 a door panel engaged with the front panel and is
9 allowed to move between a first position
10 covering the access port and a second position
11 in the receiving chamber, and thereby exposing
12 the electronic device.

1 2. The computer housing as claimed in claim 1
2 further comprising a guiding device disposed in the
3 receiving chamber for guiding the door panel when the
4 door panel is retracted into the receiving chamber, and
5 the guiding device has at least one track for sliding the
6 door panel into the receiving chamber.

1 3. The computer housing as claimed in claim 1,
2 wherein a semi-cylindrical portion is formed on the door
3 panel and engaged with the front panel.

1 4. The computer housing as claimed in claim 3,
2 wherein the door panel has a protrusion abutting the
3 front panel when the door panel is in the first position.

1 5. The computer housing as claimed in claim 4
2 further comprising a positioning portion disposed in the

3 receiving chamber abutting the door panel when the door
4 panel is in second position.

1 6. The computer housing as claimed in claim 1,
2 wherein the first position is substantially perpendicular
3 to the second position.

1 7. A computer housing for receiving at least one
2 electronic device therein, comprising:

3 a front panel having at least one access port for
4 access to the electronic device;

5 a receiving chamber located within an inner space of
6 a main body of the computer housing and
7 connected to the access port; and

8 a door panel having a semi-cylindrical portion
9 engaged with the front panel, which is allowed
10 to move between a first position covering the
11 opening and a second position in the receiving
12 chamber, and thereby exposing the object.

1 8. The computer housing as claimed in claim 7
2 further comprising a guiding device disposed in the
3 receiving chamber for guiding the door panel when the
4 door panel is retracted into the receiving chamber, and
5 the guiding device has at least one track for sliding the
6 door panel into the receiving chamber.

1 9. The computer housing as claimed in claim 7,
2 wherein the door panel has a protrusion abutting the
3 front panel when the door panel is in the first position.

1 10. The computer housing as claimed in claim 9
2 further comprising a positioning portion disposed in the
3 receiving chamber abutting the door panel when the door
4 panel is in second position.

1 11. The computer housing as claimed in claim 7,
2 wherein the first position is substantially perpendicular
3 to the second position.

1 12. A computer housing for receiving at least one
2 electronic device, comprising:

3 a front panel having at least one access port for
4 access to the electronic device;

5 a receiving chamber located within an inner space of
6 a main body of the computer housing and
7 connected to the opening;

8 a door panel engaged with the front panel and is
9 allowed to move between a first position
10 covering the access port and a second position
11 in the receiving space, and thereby exposing
12 the electronic device; and

13 a guiding device disposed in the receiving chamber
14 for guiding the door panel when the door panel
15 is retracted into the receiving chamber.

1 13. The computer housing as claimed in claim 12,
2 wherein the guiding device is a rail comprising at least
3 one track.

1 14. The computer housing as claimed in claim 12,
2 wherein a semi-cylindrical portion is formed on the door
3 panel and engaged with the front panel.

1 15. The computer housing as claimed in claim 14,
2 wherein the door panel has a protrusion abutting the
3 front panel when the door panel is in the first position.

1 16. The computer housing as claimed in claim 15
2 further comprising a positioning portion
3 disposed in the receiving chamber abutting the
4 door panel when the door panel is retracted
5 into the receiving chamber.

6 17. The computer housing as claimed in claim 12,
7 wherein the first position is substantially perpendicular
8 to the second position.
